

# Interactive Tutorial 1: Markdown

## Working with Markdown

Press `Ctrl + Shift + M` to open a formatted preview on the right.

## Basic Text

Write two sentences about yourself, each in a different paragraph.

Hello, my name is Zsofi.

What is up.

## Headers

Make a 3rd level header with your name:

Zsofia

## Emphasis

Write 4 of your favorite words using each type of emphasis:

*MY NAME IS ZSOFIA*

## Lists

Make an ordered list of 3 things you hope to achieve this semester, and elaborate on them with sub items. Then, make an unordered list of 3 classes that you're taking this semester:

- why doesn't the unordered list work after the ordered list
  - 1. I hope to learn to use this editor. 1. Further
  - 2. I want to learn to use Python.
    - 1. Wouldn't that be greater
  - 3. I hope I can update my anaconda at some point but I have little technology knowledge.
- 
- BME 3010
  - BME 4010
  - a lot of other crap (this is really confusing)

## Links

Write a sentence describing your major, and insert a link to your major's department website: [Biological engineering is the major for you if you don't know what to do.](#)

## Images

Insert the Cornell seal image with:

1. A relative file path(/Images/Cornell\_University\_seal.png)
2. A URL  
([https://raw.githubusercontent.com/AguaClara/aguacalara\\_tutorial/master/Images/Cornell\\_University\\_seal.svg.png](https://raw.githubusercontent.com/AguaClara/aguacalara_tutorial/master/Images/Cornell_University_seal.svg.png))

## Code Formatting

Put the name of this file in an in-line (single backtick) code format.

`Interactive-Tutorial-1-Markdown.md`

Put the following text in a Python-formatted code block:

```
def foo():  
    print("Particles of a feather...")  
    print("...floc together!")
```

## Tables

Create a table listing your 3 favorite animals, books, and places on campus. Use a different alignment for each column.

Animals	Books	Places on campus
Dolphin	Boys in the Boat	Gates
Chipmunk	HP	Upton
Panda	Center	Macs

## Blockquotes

Write your favorite quote. It must be attributed to Albert Einstein.

This is my favorite quote.

## Horizontal Rules

Add a horizontal rule:

Below this will be a horizontal Rule

---

## LaTeX Formatting

Copy the equation towards the end of the [Markdown tutorial](#) and paste it here:

$$a^2 + b^2 = c^2$$
